

### Cyber Operational Planning and Policy Development

Vistra's expertise in cyber operational planning and policy development gives federal government clients a vital advantage in strategic development, operational planning, and full-spectrum cyber operations.

Our work:

- Prevents tech theft
- Protects critical infrastructure
- Safeguards computer networks
- Defends the American people and the U.S. economy and government against disruption from cyberattacks

Vistra's strategic positioning supports U.S. Department of Defense missions, and interconnected systems and data as it strengthens partner alliances to secure cyberspace and shield against malicious behavior.

#### Past Performance

#### Operational Planning: The Cornerstone of Our Cyber Fluency

Our team's in-depth targeting and planning processes underpin information gathering and development of operational plans and tactics. To meet all joint requirements associated with federal government clients' broad areas of responsibility, Vistra's theater planning serves to sync:

- Cyber Intelligence, Surveillance, and Reconnaissance
- Operational Preparation of the Environment
- Data Science
- Analytics
- Computer Network Operations
- Administrative Services

#### Offensive and Defensive Cyber Operations and Deterrence

Our work supports cyber planning doctrine, policy and programs, tactics, techniques, and procedures. Vistra professionals advance international cooperation with partners as they provide guidance and resources to integrate cyber actions. Our planners customize detailed intelligence plans to secure cyber operations, syncing related activities including target selection and validation.
