

Section 508 Compliance

Vistra has intimate knowledge of Section 508 through our work with federal government clients to meet Section 508 standards; this promotes equal opportunity for people with disabilities, and those without, to perceive, understand, navigate, and interact successfully with materials produced.

Vistra offers products with the specific performance criteria and standards as required for people who are visually impaired, have difficulty hearing, are mobility limited, and/or have other functional challenges.

As required, Vistra has the creative and technical capacity to assure that all written, audio, and video materials produced are pursuant to Section 508 of the Rehabilitation Act of 1973 (29 U.S.C. 794d) for 508-compliant presentations. Vistra edits all Releasable Video Products as described:

- Add closed captioning to capture video subjects' and narrators' words per Section 508 requirements and guidelines.
- Optional Audio Descriptions (for the blind/visually impaired) that revise existing videos to create a 508-compliant format for Assistive Technology readers for each video presentation.
- Application of WCAG 2.0 Level AA U.S. Access Board standards and government and industry best practices for web-based or electronic products.
- Vistra supports assistive technology where direct information retrieval or display is insufficient.
