

Knowledge Management, Reporting Huddle System and SharePoint

Vistra offers comprehensive Knowledge Management (KM) services that cover planning, integration, maintenance and knowledge transfer to enhance situational understanding and facilitate decision-making. Our team analyzes your existing business processes, information workflow and data storage and control procedures to identify areas for increased efficiency and improved information sharing. We work closely with you to implement KM, including analyzing technical and business processes/functions, documenting findings and identifying areas for specific improvement.

To further enhance KM efforts, Vistra offers a web-based Reporting Huddle System(SM) that delivers insightful program and project management data at a single point with password-protected and encrypted access. Our enterprise-wide dashboard technology is NIST 800-171-compliant and integrates information and status for all business functions. Authorized U.S. Government (USG) professionals with Internet access, a login and password can reach our dashboards with a customer link, providing 24/7 connection to report and customized information. We also integrate valuable related data from the USG's NIPRNet system into our scalable dashboard views.

Vistra uses Microsoft SharePoint, a web-based collaborative platform, as a document management and knowledge storage system that integrates with Microsoft Office and Microsoft Teams. We configure SharePoint project sites to meet customized information needs, further enhancing KM capabilities.
